Adapter design pattern demo

- 01 Discussion. LegacyRectangle’s interface is not compatible with the system that would like to reuse it. An abstract base class is created that specifies the desired interface. An “adapter” class is defined that publicly inherits the interface of the abstract class, and privately inherits the implementation of the legacy component. This adapter class “maps” or “impedance matches” the new interface to the old implementation.

```
#include <iostream.h>
```

C++

```
typedef int Coordinate;  
typedef int Dimension;
```

```
// Desired interface
```

```
class Rectangle
```

```
{  
    public:  
        virtual void draw() = 0;  
};
```

```
// Legacy component
```

```
class LegacyRectangle
```

```
{  
    public:  
        LegacyRectangle(Coordinate x1, Coordinate y1, Coordinate x2, Coordinate y2)  
        {  
            x1_ = x1;  
            y1_ = y1;  
            x2_ = x2;  
            y2_ = y2;  
            cout << "LegacyRectangle: create. (" << x1_ << "," << y1_ << ") => ("  
                << x2_ << "," << y2_ << ")" << endl;  
        }  
        void oldDraw()  
        {  
            cout << "LegacyRectangle: oldDraw. (" << x1_ << "," << y1_ <<  
                "> (" << x2_ << "," << y2_ << ")" << endl;  
        }  
    private:  
        Coordinate x1_;  
        Coordinate y1_;  
        Coordinate x2_;  
        Coordinate y2_;  
};
```

```
// Adapter wrapper
class RectangleAdapter: public Rectangle, private LegacyRectangle
{
public:
    RectangleAdapter(Coordinate x, Coordinate y, Dimension w, Dimension h):
        LegacyRectangle(x, y, x + w, y + h)
    {
        cout << "RectangleAdapter: create. (" << x << ", " << y << "<
            << ")", width = " << w << " height = " << h << endl;
    }
    virtual void draw()
    {
        cout << "RectangleAdapter: draw." << endl;
        oldDraw();
    }
};

int main()
{
    Rectangle *r = new RectangleAdapter(120, 200, 60, 40);
    r->draw();
}
```

LegacyRectangle: create. (120,200) => (180,240)
 RectangleAdapter: create. (120,200), width = 60, height = 40
 RectangleAdapter: draw.
 LegacyRectangle: oldDraw. (120,200) => (180,240)

Output
